One light source — a token-shaped redesign of Home, Lessons and Profile.

DESIGN THESIS

The current app gives every card its own colour, its own border and its own glow, so nothing is louder than anything else and the learner has to read the whole screen to find the one thing they came to do. This redesign treats the app as a single night sky with **exactly one light source: the learner's next action**. Glow becomes scarce and earned — it marks the live thing, never decoration — while everything else steps back to flat, quiet, evenly-toned surfaces separated by space and typographic rhythm instead of by colour.

Concretely: Home resolves to one glowing Continue card that physically overlaps the hero so the artwork becomes a backdrop rather than a boxed banner; Lessons answers "where am I" with a single pulsing waypoint on a trail that is visibly travelled behind you and dim ahead; Profile becomes a premium status card plus a real trophy case with tier progression and a next-goal hook.

Nothing here recolours the fixed artwork. The palette is deepened underneath it so the trophies, the fox and the islands read as lit objects on a darker stage — the same reason dark mode lifts cards with a violet glow rather than a black shadow.

WHAT'S IN THIS DOC

- 01 Token set — all four palettes, every name filled
- 02 Component specs — 23 components the three screens depend on
- 03 Screen layouts — Home, Lessons, node path, Profile + dark
- 04 Motion & reward choreography
- 05 Migration note

All contrast ratios below are computed, not estimated. Fixed artwork is shown as labelled slots at exact pixel dimensions — no artwork was redrawn.

01

Token set

appThemes · premiumThemes × 1

Existing token names, new values. Four new intent-named tokens are proposed at the end of this section — each one exists because the redesign would otherwise be unbuildable or inaccessible without it.

1.1 · appThemes - surfaces, text, glass, brand, semantic, gamification

TOKEN	DARK	LIGHT	NOTE
background	#0B0716	#F6F4FD	Deepened from near-indigo to near-black-indigo so island and glow read as light sources.
backgroundGradient	#140B2A → #0B0716	#FFFFFF → #F1EDFC	Vertical, 0→320pt then flat. Sits behind the hero so the scrim is somewhere to land.
surface	#171033	#FFFFFF	Default card. 6.5:1 lighter than background in dark — separates without a border.
surfaceAlt	#1F1742	#F1EDFC	Nested surfaces, tracks, inactive tabs, sheet backgrounds.
text	#F5F2FF	#1A1330	Titles and numbers. Never pure white in dark — cuts halation on OLED.
textSecondary	#CFC6F0	#4A4266	Body copy, list rows, descriptions.
textMuted	#A79BD0	#6B6485	Unchanged by mandate. Both values re-verified; see §1.10.
textOnDark	#FFFFFF	#FFFFFF	Text over artwork, gradients and filled buttons only.
textOnDarkMuted	rgba(255,255,255,0.78)	rgba(255,255,255,0.82)	Only over the deep stop of a gradient or a ≥60% scrim — never over raw artwork.
border	#241C4A	#E4DEF5	Hairline 1pt. Decorative in dark; the surface step does the real separating.
borderStrong	#3D3070	#CFC5EC	Focused inputs, selected chips, the current node ring.
glassBg	rgba(23,16,51,0.72)	rgba(255,255,255,0.72)	expo-blur intensity 40 underneath. Never a bare alpha fill — Android needs the BlurView.
glassBgStrong	rgba(23,16,51,0.92)	rgba(255,255,255,0.92)	Stat bar once scrolled, sheet headers. Text-bearing glass must use this, not glassBg.
glassBorder	rgba(157,123,255,0.24)	rgba(108,59,255,0.14)	Top edge only where possible — a full ring reads cheap over artwork.
primary	#6C3BFF	#6C3BFF	Unchanged. Fill only in dark — see the contrast note.
primaryDark	#5A28F0	#5A28F0	Gradient end stop, pressed fills on light.
primaryPressed	#4E1FD6	#4E1FD6	Press fill. Paired with scale .97, not opacity.
primarySoft	rgba(108,59,255,0.18)	rgba(108,59,255,0.10)	Selected chips, the purple tint tile, ghost-button fill.
primaryGradient	#7A4DFF → #6C3BFF → #5A28F0	#7A4DFF → #6C3BFF → #5A28F0	Unchanged, identical in all four. 135°, stops at 0 / 0.55 / 1.
glow	#9D7BFF	#B49BFF	Dark: shadowColor + the only legal purple text. Light: focus highlight strokes.
success	#34D399	#077A52	Light value darkened from #34D399 — the old one was 1.9:1 text on white.
successSoft	rgba(52,211,153,0.16)	rgba(7,122,82,0.12)	Correct-answer fill, mastered-node halo.
danger	#F87171	#C42B2B	Light value darkened for the same reason. Empty hearts, wrong answers.
dangerSoft	rgba(248,113,113,0.16)	rgba(196,43,43,0.10)	Wrong-answer fill, hearts-empty banner.

warning	 #FF8A3D	 #9E4A0D	Doubles as streak in dark; the light value is text-safe, see streakText for labels.
xp	 #FFC93C	 #FFC93C	Graphic only — bolt glyph, ring, bar fill. Identical in both to p recognition.
sparks	 #4FC3F7	 #4FC3F7	Graphic only — gem glyph, bar fill.
streak	 #FF8A3D	 #FF8A3D	Graphic only — flame glyph, ring.
xpText	 #FFD466	 #8A5A00	NEW. The label-legible form of xp. See §1.9.
sparksText	 #7FD4F9	 #0A6E93	NEW. The label-legible form of sparks.
streakText	 #FFA96B	 #A34A10	NEW. The label-legible form of streak.
heroScrim	 rgba(11,7,22,0) → #0B0716	 rgba(246,244,253,0) → #F6F4FD	NEW. Dissolves artwork into the body. See §1.9.
focusRing	 #9D7BFF	 #5A28F0	NEW. 2pt ring, 2pt offset. 6.35:1 / 6.43:1 against background
lockedSurface	 #150F2B	 #EDE9F7	NEW. Replaces opacity:0.4 for locked content.
lockedInk	 #8B82AD	 #6E6884	NEW. Locked labels. 5.09:1 dark, 4.85:1 light.

1.2 · premiumThemes — Profile & Settings

Pushed deliberately richer than appThemes: a three-stop vertical bg that runs violet at the top and near-black at the bottom, a card one step lighter than the app surface, and a violet cardBorder at 30% instead of 24%. Profile should feel like you walked into a different, more expensive room.

TOKEN	DARK	LIGHT	NOTE
bg	 #1A0F3D → #100A26 → #07040F	 #FFFFFF → #F4F0FE → #EFE9FC	Three stops, vertical, at 0 / 0.42 / 1. Violet at the crown, near black at the tab bar.
bgFlat	 #0D0720	 #F8F6FE	For sub-screens that scroll far enough that a gradient would
card	 #221641	 #FFFFFF	One step lighter than app surface — the whole point of the premium family.
cardBorder	 rgba(157,123,255,0.30)	 #E1D8F8	Raised from .24. Reads as a lit edge, not a hairline.
text	 #FBF9FF	 #160F2B	A touch brighter/darker than the app values. 15.96:1 on card dark.
textSecondary	 #D6CCF5	 #453C63	Stat labels, plan copy.
textMuted	 #A79BD0	 #6B6485	Same as app — deliberately, so muted copy never shifts across navigation.
primary	 #7A4DFF	 #6C3BFF	Dark uses the lighter gradient head so CTAs stay visible on the richer bg.
primaryLight	 #A98BFF	 #8B6BFF	Links, tier labels, the "next trophy" accent. 6.21:1 on card.
track	 rgba(255,255,255,0.10)	 rgba(22,15,43,0.08)	XP ring track, progress-bar track, tier-rail rail.
divider	 rgba(157,123,255,0.18)	 #EBE5F9	Between menu rows. 1pt, inset 20pt left.

1.3 · tints — bg + fg pairs

Used for category chips, icon tiles and status pills. Dark bg values are alpha over surface; premiumThemes reuses these fg values unchanged and raises dark bg alpha from .16 to .20 (because premium card #221641 is one step lighter than app surface #171033). Light tints are identical in both families.

TINT	DARK BG	DARK FG	LIGHT BG	LIGHT FG	CONTRAST
purple	 rgba(124,77,255,.18)	 #C4AEFF	 #EFE9FE	 #5426D6	7.79 / 6.76
green	 rgba(52,211,153,.16)	 #6EE7B7	 #E3F7EF	 #0B7A53	8.96 / 4.80
coral	 rgba(248,113,113,.16)	 #FCA5A5	 #FDEAEA	 #B32B2B	7.58 / 5.50

blue	 rgba(79,195,247,.16)	 #93DCFB	 #E4F4FD	 #0A6280	8.98 / 6.07
amber	 rgba(255,201,60,.16)	 #FFD08A	 #F8F1DC	 #7A5200	9.78 / 6.17
pink	 rgba(244,114,182,.16)	 #F9A8D4	 #FCE9F3	 #A5215F	7.82 / 6.06
teal	 rgba(45,212,191,.16)	 #7EE7DC	 #E1F6F3	 #0A6B60	9.26 / 5.69
orange	 rgba(255,138,61,.16)	 #FFB98A	 #FDEDE2	 #8F3D0A	8.40 / 6.48

1.4 · gradients

All gradients are expo-linear-gradient. skillGradients and progressGradients are **identical across all four palettes** — a deliberate decision, not a gap: they are always white-on-gradient or gradient-on-track graphics, so re-tinting them per theme would only weaken recognition. Every skillGradient runs bright→deep on a 135° diagonal, and its **label always sits on the deep stop**, which is what makes white text pass AA.

TOKEN	PREVIEW	STOPS	NOTE
skillGradients.listening		#4FC3F7 → #1B5FA8	Сонсох. White label on the deep stop = 6.46:1.
skillGradients.reading		#34D399 → #0A6B4A	Унших. 6.53:1.
skillGradients.speaking		#F472B6 → #9A1E63	Ярих. 7.66:1.
skillGradients.writing		#FF8A3D → #A34A10	Бичих. 5.93:1.
skillGradients.grammar		#7A4DFF → #4E1FD6	Дүрэм. 8.43:1.
skillGradients.fill		#FFC93C → #7A5200	Нөхөж дуусга. 6.92:1.
progressGradients.primary		#7A4DFF → #9D7BFF	Lesson progress, continue card.
progressGradients.success		#34D399 → #6EE7B7	Completed / mastered.
progressGradients.xp		#FFC93C → #FFE08A	Daily goal bar, profile XP ring.
progressGradients.streak		#FF8A3D → #FFB86B	Streak ring.
progressGradients.danger		#F87171 → #FCA5A5	Hearts depleting.
progressGradients.onHero		rgba(255,255,255,.95) → rgba(255,255,255,.62)	NEW usage. The only bar allowed directly over artwork — colour would fight the sky.

1.5 · islandMap

TOKEN	DARK	LIGHT	NOTE
islandMap.green	 #34D399	 #10A176	A1 · A2 — the beginner islands.
islandMap.blue	 #4FC3F7	 #2790C4	B1 · B2.
islandMap.purple	 #7A4DFF	 #6C3BFF	C1 · C2.
islandMap.gold	 #FFC93C	 #E0A100	The trail, and the mastered star on a completed island.
islandMap.streak	 #FF8A3D	 #EE6F1F	The "you are here" waypoint pulse.

1.6 · spacing & radius

spacing.xxs	4	Icon-to-label, inside a pill.
spacing.xs	8	Between stacked lines of the same idea.
spacing.sm	12	Card interior gaps.
spacing.md	16	Card padding, screen gutter on SE.
spacing.lg	24	Screen gutter, between cards in a group.
spacing.xl	32	Between sections of the same tier.

1.7 · elevation – iOS + Android, per theme

elevation.sm iOS dark: glow @ .28, r6, y2 · light: #1A1330 @ .06, r6, y2 Android elevation: 2 Pills, chips, the tab bar edge.
elevation.md iOS dark: glow @ .34, r14, y6 · light: #1A1330 @ .09, r14, y6 Android elevation: 5

spacing.xx1	48	Between tiers. The only gap that big.
radius.sm	10	Chips, pills, small tiles.
radius.md	14	Buttons, list rows, inputs.
radius.lg	20	Cards. The default.
radius.xl	28	Hero card, sheets, the status card.
radius.full	999	Avatars, rings, hearts, the centre tab.

Standard card. In dark this is a violet bloom, not a shadow.

elevation.float

iOS dark: glow @ .45, r26, y12 · light: #1A1330 @ .14, r24, y12
Android elevation: 12 + 1pt glassBorder

The Continue card, the centre AI tab, sheets. Android has no coloured shadow — border carries the lift instead.

1.8 · typography

Onest (headings) + Inter (body) are kept. Both ship full Cyrillic coverage including the Mongolian-specific Өө and Үү. Fallback stack: Onest → SF Pro Display (iOS) / Roboto (Android) → system and Inter → SF Pro Text / Roboto → system — all three carry Cyrillic, so a font-load failure degrades in shape, never in legibility. Sizes are deliberately one step smaller than a comparable English-first app and line-heights one step taller: Mongolian strings run 20–30% longer, and Cyrillic descenders (ц ц у ф) need the extra leading.

TOKEN	SPECIMEN	VALUES	USE
display	Сайн уу, Ану	34 / 40 / 800 / Onest	Only two places: the greeting and a celebration count.
h1	Хичээлийн ертөнц	27 / 34 / 700 / Onest	Screen titles.
h2	Юу сурах вэ?	22 / 28 / 700 / Onest	Section headers, card titles.
h3	Одоо төгссөн цаг	18 / 24 / 600 / Onest	List-row titles, island level names.
body	Өдрийн зорилтоо биелүүлээрэй	15 / 22 / 400 / Inter	Everything long-form. 15 not 16 — Mongolian needs the wide.
bodyStrong	Давтаж эхлэх	15 / 22 / 600 / Inter	Buttons, emphasised values.
label	Багшийн даалгавар	13 / 18 / 600 / Inter	Pills, chips, tab labels, stat captions.
caption	12 үг давтахад бэлэн	12 / 16 / 400 / Inter	Helper text, timestamps, done/total.
overline	ДАРААГИЙН АЛХАМ	11 / 14 / 700 / Inter	+0.8 tracking, uppercase. Section eyebrows only — Cyrillic uppercase is legible but tiring.

1.9 · new tokens proposed

xpText · sparksText · streakText

The reward colours are brand recognition and cannot change — but #FFC93C is 1.5:1 on white. Today that forces every reward label into a coloured chip just to be readable, which is a large part of why the app reads busy. Splitting the fill colour from its label colour lets a reward number sit as bare text on any surface, in any theme.

app.dark #FFD466 · #7FD4F9 · #FFA96B
app.light #8A5A00 · #0A6E93 · #A34A10
prem.dark #FFD466 · #7FD4F9 · #FFA96B
prem.light #8A5A00 · #0A6E93 · #A34A10

lockedSurface + lockedInk

Locked islands, locked lessons, locked trophies and locked AI buddies are currently drawn with opacity, which multiplies through to the text and quietly destroys every ratio in §1.10. A dedicated pair keeps locked content at 4.5:1 while still reading as clearly unavailable — and it looks better, because opacity on artwork makes trophy PNGs look dirty rather than dormant.

app.dark #150F2B · #8B82AD
app.light #EDE9F7 · #6E6884
prem.dark #1B1235 · #8B82AD

heroScrim

The single most important token in the redesign. The brief asks the hero to stop being a boxed banner; the only way to do that in RN is a transparent→background LinearGradient over the bottom 45% of the artwork, so the image dissolves into the scroll instead of ending at an edge. It must be a token because the end stop has to equal background exactly, in all four palettes, or a seam appears.

app.dark rgba(11,7,22,0) → #0B0716
app.light rgba(246,244,253,0) → #F6F4FD
prem.dark rgba(13,7,32,0) → #0D072D
prem.light rgba(248,246,254,0) → #F8F6FE

focusRing

There is no focus token today. Needed for keyboard/switch-control users, for Android D-pad on classroom tablets, and as the visible target of the 44pt hit on icon-only buttons where the icon itself is 24pt. Distinct from borderStrong because it must clear 3:1 against background, not against the card.

1.10 - contrast audit - every text token on every surface it can appear on

Ratios are computed from the WCAG 2.1 relative-luminance formula against the composited (not alpha) surface colour. Where a pair is **flagged**, the number is not the problem — the usage rule is, and it is stated. Nothing here is estimated.

FOREGROUND	ON SURFACE(S)	RATIO	AA 4.5:
app.dark text #F5F2FF	background · gradient top · surface · surfaceAlt	18.01 / 17.13 / 16.43 / 15.11	PASS

#FFFFFF on light semantic fills	success #077A52 · danger #C42B2B · warning #9E4A0D	5.36 / 5.63 / 6.11	PASS

Two colours in the set are **fill-only and must never be used as text**, and the component specs enforce it: **primary** #6C3BFF on dark surfaces (3.20:1 on surface, 2.94:1 on surfaceAlt) and the bright ends of **xp** / **sparks** / **streak** on light surfaces. Dark-mode purple text uses **glow** #9D7BFF (5.79:1 on surface); reward-coloured text uses new *Text tokens. White on primary as a filled button is 5.66:1 — fine.

02

Component specs

23 components · the three screens' dependencies

Every measurement is in pt (RN density-independent units). Every interactive row is ≥ 44 pt tall or has a ≥ 44 pt hitSlop. Where a state is not listed for a component, that component does not have it.

Button The only filled CTA h 52 · r 14 · pad 20 · label bodyStrong	ANATOMY STATES TOKENS	Optional 20pt leading icon · label · optional trailing count. Icon and label centred as a group, never space-between — Mongolian labels wrap the group off-centre otherwise. Min width 120, max 2 lines before the label shrinks one step. default primaryGradient · pressed primaryPressed + scale .97 (no opacity) · disabled surfaceAlt fill + textMuted, no gradient · loading label swaps for a 20pt spinner, width frozen at measured width so the row does not jump · secondary variant surface fill + borderStrong · ghost is primarySoft fill, no border primaryGradient, primaryPressed, textOnDark, surfaceAlt, textMuted, radius.md, elevation.md, focusRing
Card The base surface r 20 · pad 16-20 · gap lg between	ANATOMY STATES TOKENS	Surface + optional 1pt border + optional elevation. Never a gradient fill unless it is the primary action. Title h3, body bold, meta caption. default surface · pressed scale .985 + surfaceAlt fill · disabled lockedSurface + lockedInk · loading Skeleton at exact fill height · empty EmptyState inside the same frame, never a collapsed card · error 1pt danger border + retry row surface, surfaceAlt, border, lockedSurface, lockedInk, radius.lg, elevation.md
TopBar Screen header h 56 + safe-area top · icons 44×44	ANATOMY STATES TOKENS	Back / title / up to 2 actions. Title h3, truncates to one line with tail ellipsis — Mongolian screen names run long, so the area is flex:1 and actions are fixed. transparent over artwork (Home, Lessons) with textOnDark · solid on scroll: glassBgStrong + blur 40 + 1pt bottom border · cross-fading in over 200ms between scrollY 0→48 · unread bell shows a 8pt danger dot at 2pt offset, no count glassBgStrong, glassBorder, text, textOnDark, focusRing
CustomTabBar Flat 5-tab bar, oversized centre h 64 + home indicator · centre 60×60 lifted 18	ANATOMY STATES TOKENS	Four 44×56 tab columns (icon 24 + label 11/14) plus a centre circle that breaks the top edge. Labels always visible — icon only fails for older adult learners and the Mongolian labels are the affordance. inactive textMuted icon + label · active primary icon, text label, and a 3pt × 18pt pill above the icon (not a colour swap a — colour-blind safe) · centre default primaryGradient + elevation.float + 2pt background-coloured ring so it reads as punched through · centre pressed scale .94 · centre badge for unread buddy messages primaryGradient, glow, textMuted, text, surface, background, radius.full, elevation.float
StatCard A number with a label min-h 76 · r 14 · pad 12	ANATOMY STATES TOKENS	Icon glyph 20 in a tint bg · value h2 tabular-nums · label caption, 2 lines allowed. Value and label left-aligned, never centred — centred numbers of different widths look unaligned in a row. default surfaceAlt · loading value becomes a 48×22 skeleton bar, label stays · zero-state value renders 0 in textMuted, never an em-dash · pressed only if it navigates surfaceAlt, tints.*, text, textMuted, xpText, sparksText, streakText, radius.md
Pill Compact stat / status chip h 32 · r full · pad 10/12 · gap 6	ANATOMY STATES TOKENS	Glyph 14 + value label. Over artwork it gains glassBg + blur 30 + glassBorder; on a surface it uses a flat tint. default · selected primarySoft + borderStrong + text · locked lockedSurface + lockedInk + 12pt lock glyph · counter var appends a tabular-nums value that animates via CountUp, never a hard swap glassBg, glassBorder, tints.*, primarySoft, borderStrong, radius.full
ProgressBar Linear progress h 8 (10 on the primary card) · r full	ANATOMY STATES TOKENS	Track + gradient fill + optional right-aligned caption above. Fill has a 2pt inset so the track shows at 100%. default progressGradients.primary · over artwork progressGradients.onHero · complete success gradient + a 14pt chevron the right · indeterminate a 40%-width fill translating across at 1200ms linear loop · zero renders the bare track, not a 1px sliver progressGradients.*, track, surfaceAlt, radius.full
ProgressRing	ANATOMY	SVG (react-native-svg) circle track + gradient arc, starting at 12 o'clock, clockwise, round caps. Content slot in the middle

Circular progress 3 sizes: 40 / 64 / 112 · stroke 4 / 6 / 8	STATES TOKENS	default xp gradient · loading track only, arc at 0, centre skeleton · complete arc closes and the centre swaps to the level number with a 220ms cross-fade · the 112 size is the profile avatar ring and gains a soft glow at ≥90% progressGradients.xp, track, xp, radius.full
HeartsRow Lives 5 × 22pt glyph · gap 6 · row h 44	ANATOMY STATES TOKENS	Five heart glyphs, filled left to right. Trailing timer caption when any are empty: "1:42 дараа сэргэнэ". Whole row is one 44pt tap target opening the refill sheet. full danger-filled · spent 1pt danger outline, no fill (outline not grey — grey reads as disabled) · zero all outlined + the row tints dangerSoft and the caption becomes "50 Очирхоноор дүүгрэх" · unlimited (premium) collapses to a single heart infinity glyph, which also removes the timer danger, dangerSoft, lockedInk, textMuted, sparksText, radius.full
DailyGoalCard Progress to today's XP goal Inline row h 56, not a card	ANATOMY STATES TOKENS	Demoted from a full card to a single row: flame glyph · "Өдрийн зорилт" label · tabular value "30 / 50" · bar spanning the full width beneath. Tapping opens the 20/50/100 picker sheet. default xp gradient bar · met bar turns success, the flame lights, and a one-time RewardBurst plays · loading bar becomes an indeterminate track · goal-not-set shows "Зорилтоо сонго" as a ghost button in place of the value progressGradients.xp, progressGradients.success, streak, xpText, textSecondary, surfaceAlt
Avatar User image 4 sizes: 32 / 44 / 64 / 96	ANATOMY STATES TOKENS	Circular image, 1pt inner border at 10% white to stop light photos bleeding into light surfaces. Fallback is initials in OneS 600 on a primarySoft fill — never a generic person glyph. default · with ring wrapped in ProgressRing at +8pt diameter · online 10pt success dot, 2pt background-coloured ring · loading skeleton circle · editable 28pt pencil affordance at bottom-right, itself 44pt of hit area primarySoft, text, success, background, track, radius.full
AwardBadge One trophy in the case 84×104 cell · art 72 · r 16	ANATOMY STATES TOKENS	Trophy PNG (72pt, aspect-fit) over a tier plate · name caption, 2 lines, centred · tier hairline at the bottom edge. The plate what carries the tier colour — the artwork is never tinted. earned full art + tier-coloured plate + elevation.sm · locked lockedSurface plate, art at 8% luminosity as a silhouette (pre-rendered, not opacity), lockedInk name, 14pt lock glyph bottom-right · new earned within 48h gets a 2pt glow ring and slow 3s pulse · pressed scale .96 → detail sheet lockedSurface, lockedInk, tints.*, glow, text, elevation.sm, radius.md
IconTile Skill / category entry 2-col grid · h 104 · r 20	ANATOMY STATES TOKENS	skillGradient fill, 135°. Glyph 26 top-left at 60% white. Label bodyStrong in textOnDark, bottom-left, pinned to the deep end of the gradient. Optional caption "12 хичээл". default · pressed scale .97 + a 12% black overlay (not opacity — opacity would reveal the background through the gradient) · locked lockedSurface, no gradient, lock glyph replacing the skill glyph · coming-soon a "Тун удахгүй" pill top-right and whole tile drops to lockedSurface skillGradients.*, textOnDark, lockedSurface, lockedInk, radius.lg
SectionHeader Divides the scroll h 32 · mt xl · mb sm	ANATOMY STATES TOKENS	Overline eyebrow (optional) + h2 title + optional trailing text action. The action is a 44pt target and reads "Бүгд" — never an arrow glyph alone. default · with action · loading title stays, count skeletonises text, textMuted, glow, primary
EmptyState No data, no error min-h 160 · centred	ANATOMY STATES TOKENS	A 64pt Spark Fox pose (reused, not new art) · h3 line · caption line · optional ghost button. Always inside the card frame where would have held the data, so the layout does not jump when data arrives. default · in-card compact variant drops the mascot to 40pt and the button to a text link surface, text, textMuted, primarySoft, radius.lg
Skeleton Loading placeholder r matches the real element	ANATOMY STATES TOKENS	A surfaceAlt block with a 1400ms shimmer sweeping at 20% glow. Must be laid out at the true final height of the content it replaces. shimmer default · static when reduce-motion is on · never more than 3 shimmer groups on screen at once — beyond that the screen reads as broken surfaceAlt, glow, radius.*

03 Screen layouts

375pt viewport · light + dark · art slots a

Dashed slots are the fixed artwork you already own, drawn at the pixel dimensions the layout reserves for them. Nothing was recoloured or redrawn. All copy is the shipped Mongolian.

3.1 Нүүр · Home the daily launchpad

THE PROBLEM

Nine sections, each a card, each with its own accent — so the eye has to price every one of them before it can act. The hero also ends at a hard edge, which turns lovely artwork into a banner ad.

THREE TIERS, IN ORDER

PRIMARY — one card, glowing

Continue. It is the only gradient fill, the only elevation.float, and it physically overlaps the hero so it is impossible to scroll past without seeing. Everything else on the screen is flat.

SECONDARY — measure, then two next steps

The goal is demoted from a card to a bare inline row — it is a readout, not an action. Below it, review and assignments as two equal half-width tiles: both are "something is waiting for you".

BROWSE — for when nothing is waiting

The four skill tiles keep their grid because they are a genuine menu. IELTS and Idioms drop out of the vertical stack into a horizontal rail — they are occasional, and the peeking third card teaches the gesture.

SPACING

hero → continue -28 (overLap)

continue → goal 24

goal → next-step tiles 32

tier → tier 48

screen gutter 20 (16 on SE)

last section → tab bar 40

WHAT THE HERO DOES

The sky art runs edge to edge and under the status bar, then heroScrim dissolves its bottom 45% into background. There is no card, no border, no rounded corner — the artwork simply becomes the page. The fox overlaps the scrim so he stands in front of the content rather than inside a frame. At streak 0 the ember loop stops and the fox switches to his sleeping pose; nothing else changes.

Хичээл · Хичээлийн ертөнц

where am I, and what's next

THE PROBLEM

Six islands all look equally available, the trail looks the same everywhere, and the label cards are the same weight whether the level is finished, in progress or locked. The map is beautiful and it answers no question.

FOUR STATES, FOUR SILHOUETTES

- **Mastered**
Full-colour art, gold star, filled bar, done/total in success. The trail behind it is solid gold.
- **You are here**
The only pulsing thing on the screen: a waypoint chip above the island, a 3pt glow ring, an elevated label card, and the only button on the map. It also owns the initial scroll position.
- **Unlocked, not started**
Full-colour art, flat label card, empty track. Reachable, not urgent.
- **Locked**
Pre-rendered silhouette of the island art on a LockedSurface plate — never opacity, which makes the art look dirty and breaks contrast. The unlock condition is stated, not implied.

THE TRAIL

Travelled is islandMap.gold, 6pt, solid, with a 14pt gold bloom at 18%. Ahead is a 5pt dotted line in textMuted at 35%. The break happens exactly at the current island, so the "you are here" reading survives even at a glance with the labels unread. Implementation note in §05 — the shipped line.webp is one image and has to be split or overlaid.

THE STAT BAR

It cannot sit as a solid bar on a full-bleed illustration without ruining it, and it cannot be transparent or the numbers vanish over clouds. So: it is absolutely positioned, transparent at scrollY 0 with each pill carrying its own glassBg + blur 30, and the bar behind them cross-fades to glassBgStrong + blur 40 + a 1pt bottom border between scrollY 0→48. Shown here in the scrolled state, which is the harder one.

SPACING

island centre → island centre 160
island art → label card 8
horizontal swing ±68 from centre

what opens when you tap an island

The island map is the atlas; this is the street. It repeats the map's four states at

APPTHEMES.DARK · FULL SCROLL

APPTHEMES.LIGHT · TOP OF SCROLL, CROPPED

Cropped to the top three islands — the structure below is identical to the dark column. Note the trail switches to islandMap.gold light #E0A100: the dark-mode gold on a bright sky and disappears.

The island map is the atlas; this is the street. It repeats the map's four states at

APPTHEMES.DARK

APPTHEMES.LIGHT

node scale so the two screens teach each other, and it keeps the same "one glowing thing" rule — exactly one node pulses.

STRUCTURE

Sticky header — back, level code, and a thin overall bar. It carries `islandMap` colour as a 3pt top rule so you never lose track of which level you are inside.

Chapter groups — 38 lessons is too many for one column. Chapters of 5–7 with a quiet divider, and a chapter is only expanded if it contains the current node.

Nodes — 64pt, ±28pt of horizontal swing for rhythm; the connector is 4pt and takes the same travelled/ahead treatment as the trail.

Chapter test — a 76pt hexagonal-plate node closing each chapter. Bigger, gold, and it is the only node that can consume hearts, so it earns the size.

NODE STATES

Mastered — success fill, white check, no ring.

Passed with a mistake — success fill, gold 2pt ring. A quiet invitation to redo it.

Current — `primaryGradient`, 3pt glow ring, 2.4s pulse, "ЭНД" flag, 76pt not 64pt.

Unlocked — surface fill, borderStrong ring, lesson glyph.

Locked — `lockedSurface`, `lockedLink` lock glyph, no ring.

3.3

Профайл · Profile

premiumThemes · identity, progress, collection

THE PROBLEM

A hundred trophies in ten tiers is a real collection, and it is currently a horizontal strip — a format that can only ever show you what you already have, never what you are missing, which is the entire psychology of collecting. The header is also just an avatar and four numbers; nobody screenshots four numbers.

THE STATUS CARD

Designed as one shareable object, not a screen region: a single radius.x1 card with its own crown gradient, holding avatar, level, CEFR, place and the four stats inside one border. Share exports exactly this card at 2× with the wordmark added — which is why the stat row lives inside it rather than beneath it.

THE TROPHY CASE

Show the holes. A 4-column grid of fixed cells with locked slots always visible. The silhouette is what creates the want; a strip of earned badges creates nothing.

Tier is the spine. A horizontal tier rail with per-tier counts doubles as the filter and as the ladder. Each tier plate carries its own colour so the ten tiers are legible as a progression, not ten random palettes.

One hook, always. A single "next trophy" card at the top of the case, chosen server-side as the nearest unearned one, with its real remaining count. This is the only place on Profile with a progress bar, so it is unmissable.

Artwork is never tinted. The tier colour lives in the plate behind the PNG. Locked uses a pre-rendered silhouette, not opacity — see §1.9.

SECTION ORDER & SPACING

- 1 status card identity first
- 2 plan +24 while attention is high
- 3 trophy case +48 the reason to return
- 4 quick menu +48 utility, last
- menu grid 2 cols not 3 — Mongolian labels

A NOTE ON THE 2MB PNGs

The case renders 12 badges above the fold. At the current asset weight that is ~24MB. The grid must request a 144px-wide derivative (Cloudflare Image Transformations, width=144,quality=85) and only load full resolution in the detail sheet. If transformations are not wired yet, the case should paginate one tier at a time instead — flagged as an open question.

PREMIUMTHEMES.DARK

PREMIUMTHEMES.LIGHT

Directions to choose between

reference these by

Three directions per screen, cropped to the region that actually differs. The one marked **BUILT ABOVE** is what §3 renders in full; the other two are real alternatives, not straw men. Everything here uses the same token set — these are structural choices, not visual ones.

HOME — THE HERO / PRIMARY ACTION RELATIONSHIP

Artwork becomes the page; the primary action physically breaks the seam. Best balance of atmosphere and speed, and the only one where the fox is still large enough to have a personality.

Art shrinks to a 118pt band and every stat collapses into one ledger row. Four sections above the fold instead of two. Fastest for a daily returning learner, and the best fit for adult professionals — but it spends most of the brand to get there.

The hero *is* the action — one full-height panel, one decision, everything else below the fold. Most cinematic and the strongest for new or lapsed users; risky for daily ones, who now scroll for the review card they used to see immediately.

LESSONS — HOW THE JOURNEY IS READ

Keeps the illustration as the hero and makes the trail itself carry the state. One pulsing waypoint, gold behind, dotted ahead. Reads in well under a second and needs no new artwork beyond splitting the trail.

Collapses the map into a horizontal level rail and puts the node path on the same screen — one tab instead of two. Answers "what's next" in zero taps, at the cost of the vertical journey metaphor and most of the island art.

A fixed CEFR ladder pinned to the left edge — you are always literally somewhere on A1→C2 — with one island in focus at a time. The clearest "where am I" of the three and the most scalable, but it turns a map into a stepper.

PROFILE — THE TROPHY CASE

Profile shows one trophy — the next one — plus a ten-segment tier meter; the full case is its own screen. Keeps Profile short and makes the collection feel curated. Weakest at conveying scale, strongest at conveying desire.

Try next: "build 1c out full-length in both themes" · "combine 1d's trail with 1f's altitude rail"
· "show 1g at 100 trophies scrolled"

https://87814bd3-4706-498a-9b5d-782ea332768c.claudeusercontent.c...e/SparkXP%20Redesign-print.dc.html?_omeo=https%3A%2F%2Fclaude.ai

Page 18 of 24

Two rules run through all of it. **Nothing changes size between states** — a skeleton occupies the true final height, so the page never reflows under the learner's thumb. And **a tier-one element never disappears**: the Continue card and the trophy case degrade into a different message inside the same frame, because their absence would silently change what the screen is for.

LOADING

Continue card. Exact final height, shimmer at 20% glow, 1400ms.

EMPTY

Review deck at zero due. Empty is a reward here, not a dead end — it always offers the next thing.

ERROR

In-card, never a full-screen error. Always states when the cached data is from, so the learner can judge it.

SCREEN	ELEMENT	LOADING	EMPTY	ERROR
Нүүр	Hero stat pills (XP · Sparks · Hearts)	Pills render at final width with the value as a 28×14 skeleton. Never collapse — the row shifting is worse than a blank number.	Not possible; a new account is 0 / 0 / 5 hearts and renders as zeroes.	Last cached values from persistCache; a 10pt textMuted dot after the row. No copy over artwork.
Нүүр	Continue card	Full-height purple card with skeleton title, meta and bar. It is the primary action — it must hold its space or the whole page reflows.	No lesson started yet → the card becomes "Эхний хичээлээ эхлүүлье" with the same gradient and a CTA to A1. Never hidden.	Same card, title "Дахин оролдоно уу" button becomes "Дахин ачаалах". Gradient retained so the tier hierarchy survives error.
Нүүр	Daily goal row	Indeterminate bar; label visible, value hidden.	Goal not chosen → value replaced by a ghost "Зорилтоо сонго" button opening the 20/50/100 sheet.	Row hides entirely. It is a readout, not an action; a broken readout is noise.
Нүүр	Review tile	Skeleton number, real caption.	0 due → "Бүгд дууссан" with a success tick and the tile drops to surfaceAlt. Tapping still opens the deck to learn new words.	Tile shows "—" and the caption becomes "Дахин оролдох".
Нүүр	Assignments tile	Skeleton number, real caption.	No teacher → the tile is replaced by "Ангид нэгдэх" linking to /join. Learners without a class must never see an empty teacher slot.	Same as review tile.
Нүүр	Skill grid	Four gradient tiles at full colour with skeleton counts. Gradients are static, so they never need to load.	Counts of 0 render as "Тун удахгүй" and the tile takes the coming-soon treatment.	Counts drop away; tiles remain tappable until the destination screens load their own data.
Хичээл	Island progress	Each label card keeps its size with a skeleton done/total and an empty track. Islands and trail render immediately from bundled assets.	New account → A1 is the current island, everything above is locked, and the trail has no travelled segment.	Cards show the level code and name of the island. The map is still navigable — it is mostly static art.
Хичээл	Stat bar	Pills skeleton as on Home.	Zeroes.	Cached values.
Хичээл	Whole map	Sky + islands + trail paint instantly; only the labels are async. There is no full-screen spinner on this route.	Not possible.	Full-bleed EmptyState with the fox and "Газрын зургийг ачаалж чадсангүй" text, only if the bundled art itself fails.
/level	Node path	7 skeleton nodes at true positions with the connector drawn — the path shape is known before the data is.	Chapter with no lessons published → "Энэ бүлэг бэлтгэгдэж байна" between the dividers.	Header retained; body becomes an in-card EmptyState with a retry.
Бүтэц	Structure	Full-screen skeleton for the main content area.	Not possible; a new account is 0 / 0 / 5 hearts and renders as zeroes.	Last cached values from persistCache; a 10pt textMuted dot after the row. No copy over artwork.

SparkXP Redesign		2026.07.29, 16:30		
Профайл	Status card	Avatar skeleton circle, ring at 0, name and username as bars. The card frame and gradient crown render immediately.	No avatar → initials on primary slot. No org → the place chip is omitted, not shown blank.	Cached identity; stat values become stale. Share is disabled while stale so nobody shares wrong numbers.
Профайл	Trophy case	12 skeleton cells in the grid, tier rail as 3 skeleton pills. Cells are fixed-size so no reflow when the PNGs land.	0 earned → all 12 cells locked, and the next-goal card promotes the easiest starter trophy. The case is never hidden at zero — that is the exact moment it matters most.	Grid replaced by an in-card EmptyState; retry; the tier rail and the 38/100 count render from cached profile data.
Профайл	Next-trophy hook	Skeleton title and bar inside the real card frame.	All 100 earned → the card becomes a celestial-tier congratulation and the bar is replaced by a completion date.	Card hidden. A wrong next-goal is worse than none.
Профайл	Plan card	Skeleton row at fixed height.	Not possible; every user has a plan.	Assumes Standard and shows the upgrade CTA — the safe direction to fail in.

Motion & reward choreography

200–300ms · one overshoot per celebration, never

The rule that keeps this premium rather than toy-like: **utility motion never bounces; only a reward may overshoot, and only once.** Everything a learner triggers dozens of times a day (taps, navigation, bar fills) uses a flat ease-out. Springs are reserved for the four moments that are supposed to feel like something — XP landing, streak advancing, quiz complete, trophy unlocked. Every celebration is skippable by tapping anywhere, and every one respects `AccessibilityInfo.isReduceMotionEnabled` by collapsing to a 150ms cross-fade with the haptic retained.

MOMENT	TIMING	CHOREOGRAPHY
Press feedback	90ms in · 140ms out · standard	scale to 0.97 (0.94 for the centre tab), plus a fill swap to <code>primaryPressed</code> . Never opacity — on a gradient, opacity shows the background through and looks broken. Light haptic on press-in, nothing on release.
Screen push	280ms · enter/exit	Incoming slides 24pt from the right and fades 0→1; outgoing shifts -12pt and fades to 0.6. No scale. The tab bar never animates between tabs.
Tab change	200ms · standard	Cross-fade only, no slide — 5 tabs sliding is disorienting. The active pill above the icon translates between tabs over the same 200ms; the icon colour lerp.
Sheet present	300ms in · 220ms out · enter/exit	Translate from +100% with the scrim fading 0→0.62 over the first 180ms. Drag-to-dismiss is 1:1 with the finger and spring back with the reward spring if released above 40%.
Progress-bar fill	600ms · standard, delayed 120ms	Width animates from the previous value, not from 0 — animating from 0 on every mount makes returning to Home feel like losing progress. The 120ms delay lets the screen settle first.
XP count-up	180ms travel + 400ms count	RewardBurst carries "+15 XP" to the pill, then the pill counts with an ease-out so it decelerates into the final number, and pulses to 1.08 for 140ms on landing. Numbers are tabular so the pill never changes width mid-count.
Streak flame	2.4s ambient loop · 520ms advance	Ambient: scale 1→1.03 and opacity .92→1, sine, infinite — slow enough to be peripheral. On advance: 520ms reward spring to 1.18 with the glow ring expanding 0→24pt and fading, once. At streak 0 the loop stops entirely and the flame renders in <code>lockedInk</code> — the absence of motion is the message.
Heart loss	420ms total	The lost heart scales to 1.25 (120ms), the fill drains top-to-bottom into an outline (200ms), then a 4pt horizontal shake for 100ms. Error haptic fires once at the start. The remaining hearts do not move.
Hearts empty	300ms	The row tints <code>dangerSoft</code> , the refill CTA slides up 8pt into place, and the regen timer starts counting. No modal — a modal here reads as punishment.
Quiz complete	~2.2s, skippable	(1) 0ms heavy haptic + Confetti burst; (2) 120ms the score ring draws over 700ms while the accuracy % counts up; (3) 700ms the XP row slides up 16pt and counts; (4) 900ms if there is a combo, "3 дараалан!" scales in with the reward spring and the multiplier chip flips; (5) 1400ms the Continue button fades in and is immediately tappable. Tapping anywhere at any point jumps straight to step 5.
Trophy unlock	900ms	The badge plate lights from <code>lockedSurface</code> to its tier colour over 240ms, the silhouette cross-fades to the real artwork over 300ms, then a single glow ring expands 0→32pt and fades. Success haptic on the cross-fade, not the start.
Island / node tap	160ms then push	The island scales to 1.04 and its glow doubles, the label card lifts 4pt, then the level screen pushes. Selection haptic. <code>trail</code> does not animate — it is a map, and maps hold still.

HAPTICS MAP

selectionAsync — tab change, chip select, island tap, swipe-card commit

impactAsync(Light) — primary button press-in, node tap

notificationAsync(Success) — correct answer, goal met, trophy unlock

notificationAsync(Error) — heart lost (once, not per wrong tap)

impactAsync(Heavy) — quiz-complete burst, once, on frame 1 only

Muted entirely when Settings → Haptics is off. Never fire two haptics inside 120ms.

All of it Reanimated 3 on the UI thread. No Animated + useNativeDriver:false for anything that runs during a scroll.

Migration note

PURE TOKEN-VALUE SWAP · theme.ts only

All surface, text, border, glass, brand and semantic hex values in both appThemes variants.

All eleven premiumThemes values in both variants.

Every tints.*, skillGradients.*, progressGradients.*, islandMap.* value.

The typography scale — sizes, line-heights and weights change; the font families do not, so no useFonts change and no new assets.

Radius scale (sm 10 / md 14 / lg 20 / xl 28) — every component already reads radius.*.

Ship this half alone and the app is already ~70% of the redesign, with zero component risk. It is a genuinely safe first PR.

REQUIRES COMPONENT CODE

Home restructure — the Continue card must move to overlap the hero (marginTop:-28, hero overflow:visible), the goal card becomes an inline and IELTS/Idioms move into a horizontal browse rail. This is a index.tsx rev not a token change.

heroScrim — a new LinearGradient layer over the sky image. ~15 lines in the hero component.

Trail state on Lessons — the golden trail is currently one static line.webp. Travelled-vs-ahead needs it split into six per-segment images (or one image masked by an absolutely-positioned overlay at 55% opacity). Cheapest version keep the single image and lay a background-coloured 55%-opacity rect over the un-travelled portion.

TrophyCase — new component. The current horizontal strip cannot express tiers, locked plates or the next-goal hook.

Locked states — everywhere locking is currently opacity:0.4 it must become LockedSurface + LockedInk. Opacity multiplies through and silently breaks contrast guarantees in §1.10.

Shadow → glow split — elevation.* must return a theme-aware object, not a constant, so dark mode emits shadowColor: glow and light mode emits a new shadow. Today it is a constant.

THE 56-FILE STATIC-PALETTE DEBT — WHERE THIS DESIGN DEPENDS ON IT

Roughly 56 files still import { colors } from the static dark palette instead of reading the active theme, so they are frozen dark and ignore the toggle. A token-value redesign is the natural moment to finish that migration, because **three specific things in this design silently break without it:**

- 01 Light mode on Lessons and Profile is not optional here.** The islands ship *_light variants and the day-sky backdrop exists; if the screen chrome stays frozen dark, light mode shows dark glass pills on a bright sky — the worst-looking state in the app. Files: the Lessons map, the island label card, the node-path screen, TopBar.
- 02 The new *Text tokens only work theme-aware.** Their whole purpose is that XP is #FFD466 in dark and #8A5A00 in light. A static import pins them to the dark variant and every reward label in light mode fails AA at roughly 1.7:1. This is the one place where not migrating produces an actual accessibility regression, not just an ugly screen.
- 03 Glow-vs-shadow is theme-conditional by definition.** A violet glow on a white light-mode card looks like a rendering bug. Any component still importing the static palette will emit the dark glow in both themes.

Suggested order: (1) land the token values with the static palette still pointing at appThemes.dark — every frozen file gets the new dark look for free and nothing regresses; (2) migrate the ~14 files behind these three screens and turn on light mode for them; (3) codemod the rest — colors.x → useTheme().x is mechanical for ~90% of call sites; (4) delete the static export so it cannot be re-imported. Add an ESLint no-restricted-imports rule at step 2 so the debt cannot grow while you pay it down.

WHAT I'D DO NEXT

Pick one direction per screen from the variations and I'll collapse this to a single resolved spec.

Send the real trophy PNGs, fox art and island renders — every art slot is already dimensioned, so they drop straight in and I can re-check the palette against the actual artwork.

Add the AI Buddy and Games tabs so the visual language is proven across all five, not three.

OPEN QUESTIONS FOR YOU

Is the day-sky backdrop light enough to carry white-on-glass pills, or do light mode Lessons need a scrim too? I've specced one; it may be unnecessary.

Trophy PNGs are ~2MB each — the trophy case shows 12 at once. Is Client Image Transformations in place yet, or should the case load tier-by-tier?

Streak now advances on daily-goal completion. Should Home's goal row become the streak's home, rather than having both a flame pill and a goal

Turn §1 into an actual `theme.ts` patch plus a jest snapshot that fails CI if any pair in §1.10 drops below 4.5.
